STATEMENT OF WARRANTY

Ludlum Measurements, Inc. warrants the products covered in this manual to be free of defects due to workmanship, material, and design for a period of twelve months from the date of delivery. The calibration of a product is warranted to be within its specified accuracy limits at the time of shipment. In the event of instrument failure, notify Ludlum Measurements to determine if repair, recalibration, or replacement is required.

This warranty excludes the replacement of photomultiplier tubes, G-M and proportional tubes, and scintillation crystals which are broken due to excessive physical abuse or used for purposes other than intended.

There are no warranties, express or implied, including without limitation any implied warranty of merchantability or fitness, which extend beyond the description of the face there of. If the product does not perform as warranted herein, purchaser's sole remedy shall be repair or replacement, at the option of Ludlum Measurements. In no event will Ludlum Measurements be liable for damages, lost revenue, lost wages, or any other incidental or consequential damages, arising from the purchase, use, or inability to use product.

RETURN OF GOODS TO MANUFACTURER

If equipment needs to be returned to Ludlum Measurements, Inc. for repair or calibration, please send to the address below. All shipments should include documentation containing return shipping address, customer name, telephone number, description of service requested, and all other necessary information. Your cooperation will expedite the return of your equipment.

Model 43-89, 43-90, 44-116 Alpha/Beta Scintillators

March 2022

1. GENERAL

The Model 43-89, Model 43-90, and Model 44-116 detectors are used for detecting alpha and/or beta radiation. All three detectors use the same housing and differ only in the scintillator and window back-up that are used. The Model 43-89 is used for alpha and beta detection, the Model 43-90 for alpha detection only, and the Model 44-116 for beta detection only.

A zinc sulfide [ZnS (Ag)] scintillator is used for detecting alpha particles, and a thin plastic scintillator is employed for detecting beta radiation. The scintillation material is covered by metalized polyester to reduce light response (causing excessive background counts). The window is protected by a 79% open, 0.076 cm (0.030 in.) thick, stainless steel hex 0.64 cm (0.25 in.) screen. *When changing the metalized polyester window on a detector, it is not necessary to recalibrate the instrument as long as a functional check is performed on the instrument and its readings are consistent with the readings before the window was replaced.*

The photomultiplier tube and crystal assembly may easily be removed for repair. Refer to the assembly view drawing near the end of this manual for details of construction and parts.

Discriminating alpha and beta radiation simultaneously (Model 43-89 only) requires the counting instrument to have either separate power supplies or window/threshold controls for each channel. The Ludlum Model 2929 Scaler, Model 2223, Model 2224, or Model 2360 instruments provide the necessary circuitry for simultaneous alpha-beta discrimination. Models 43-90 and 44-116 are compatible with any LMI general purpose survey meter, ratemeter, or scaler. Refer to the appropriate instrument manual for calibration procedures.

The photomultiplier tube typically operates between 500 and 1000 volts, and the manufacturer recommends no more than 1500 volts.

Model 43-89, 43-90, 44-116 Alpha/Beta Scintillators
March 2022

2. SPECIFICATIONS

Photomultiplier Tube: 3.8 cm (1.5 in.) diameter

Scintillator Material:

Model 43-89: ZnS (Ag) deposited on a 0.025 cm (0.010 in.) rectangular plastic scintillator

Model 43-90: ZnS (Ag)

Model 44-116: 0.025 cm (0.010 in.) rectangular plastic scintillator

Window:

Model 43-89: 1.2 mg/cm² metalized polyester

Model 43-90: 0.8 mg/cm² metalized polyester

Model 44-116: 1.2 mg/cm² metalized polyester

Window Area:

Open area: approximately 100cm²

Active area: approximately 125 cm²

Efficiency (4 π):

Model 43-89: 17.5% for ²³⁹Pu, 10% for ⁹⁹Tc and 17.5% for ⁹⁰Sr⁹⁰Y

Model 43-90: 20% for ²³⁹Pu

Model 44-116: 15% for ⁹⁹Tc, 4% for ¹⁴C and 30% for ⁹⁰Sr⁹⁰Y

Typical Background:

Model 43-89: Alpha: 3 cpm or less

Beta: 300 cpm or less

Model 43-90: Alpha: 3 cpm or less

Model 44-116: Beta: 300 cpm or less

Crosstalk: (Model 43-89 only)

Alpha to beta: 10% or less

Beta to alpha: 1% or less

Response Uniformity:

Model 43-89: $\pm 10\%$ from average reading

Model 43-90: $\pm 10\%$ from average reading

Model 44-116: $\pm 10\%$ from average reading

Operating Voltage: 500-1000 volts (1500 maximum)

Gamma Sensitivity:

Model 43-89: approximately 20 cpm/ μ R/hr

Model 44-116: approximately 20 cpm/ μ R/hr

Temperature Range: -20 to 50 °C (-4 to 122 °F)

Connector: series "C," unless specified otherwise

Protector Screen: 22 ga [0.076 cm (0.030 in.)] stainless steel hex [0.64 cm (0.25 in.)], 79% open

Size: 33 x 10 x 10 cm (12.25 x 4 x 4 in.) (L x W x H)

Weight: 0.68 kg (1.5 lb)

Construction: aluminum with beige powder coating
